## 🎯 Correlated Parlay Suggestions

Top 5 combo(s) with positive combined model edge in the +280–+450 range. SGP = Same-Game Parlay — sportsbook applies its own correlation haircut to the payout. Market odds shown are the raw multiplication; actual SGP payout will be lower.

## ⓘ GLOSSARY

### PROBABILITIES

**Model** — Our simulation's estimated win/cover/over probability for this game

**Pinnacle** — Sharp offshore book — de-vigged implied probability. Best market signal available. Used as the sanity check

**Retail** — US sportsbook (DraftKings / FanDuel / BetMGM) — de-vigged implied probability. This is what you actually bet into

**Edge** — Model prob minus Retail implied prob. Positive = model likes this side more than the market does

**Band (3–7)** — 25th–75th percentile range from the simulation. The game lands inside this range 50% of the time

### BET MARKETS

**ML** — Moneyline — straight win/loss bet. No spread. Model uses a 35% model / 65% Vegas blend since our sim only models pitching

**RL** — Run Line — home team -1.5 spread. Home team must win by 2+ runs to cover. Primary model bet

**O/U** — Over/Under — total combined runs scored. Model picks the better edge direction (OVER or UNDER)

**K prop** — Strikeout prop for the starting pitcher. Line = posted K total. P(O) = model's probability of going over that line. Edge = P(O) minus market implied

### THREE-PART LOCK GATES

**Gate 1: Sanity** — |Model − Pinnacle| must be ≤ 4%. If the model disagrees with the sharp market by more than 4 points, something is wrong — skip the game

### STARTER FLAGS

**VOLATILE** — Pitcher's recent velocity is trending down — higher variance, less reliable projection

| | |
|---|---|
| **Gate 2: Odds Floor** | Retail ML must be better than −225. Avoids heavy favorites where you risk too much to win too little |
| **Gate 3: Edge** | Model must beat the retail implied probability by ≥ 1.0%. This is the actual closing line value (CLV) edge you're betting on |
| **TIER 1** | Edge ≥ 3.0% — strong signal. Quarter-Kelly sizing |
| **TIER 2** | Edge ≥ 1.0% — medium signal. Eighth-Kelly sizing |

| | |
|---|---|
| **GAINER** | Pitcher's velocity is trending up — potentially outperforming their season stats |
| **xwOBA** | Expected weighted on-base average allowed. Measures pitcher quality based on contact quality, not outcomes. Lower = better pitcher. League avg ≈ 0.315 |
| **✓ confirmed** | Official lineup confirmed by the team |
| **~ projected** | Probable starter based on rotation — not yet officially confirmed |

## HOW IT WORKS

| | |
|---|---|
| **Level 1** | XGBoost + LightGBM + CatBoost ensemble predicts the probability each team covers the run-line from both perspectives independently — not just 1 minus the other side |
| **Level 2** | Bayesian hierarchical stacker adjusts raw probability based on pitcher matchup type (LHP vs RHP), lineup quality, bullpen strength, umpire K/BB tendencies, and how much the model agrees with the Pinnacle sharp market |
| **Key inputs** | Pitcher xwOBA/K%, bullpen ERA/WHIP, batting matchup quality vs LHP/RHP, park factors, circadian travel edge, umpire tendencies, Vegas line. Trained on 2023–2025 MLB games (~7,300 games) |

## WHEN TO BET

| | |
|---|---|
| **TIER 1 (≥3%)** | Strong signal — quarter-Kelly stake. All three lock gates passed with a meaningful edge over the retail market |
| **TIER 2 (≥1%)** | Medium signal — eighth-Kelly stake. All three gates passed but edge is smaller; size accordingly |
| **DO NOT BET** | "No Pinnacle" games (no sharp market sanity check) or games marked "Sanity fail" (model disagrees with Pinnacle by >4 points) |
| **2025 Record** | Model ≥ 0.580 → 58.3% win rate (+11.4% ROI) · Model ≥ 0.600 → 62.5% win rate (+19.3% ROI) across 2,398 games. Best months: Apr, May, Aug, Sep |
