🎯 Correlated Parlay Suggestions

Top 5 combo(s) with positive combined model edge in the +280–+450 range. SGP = Same-Game Parlay — sportsbook applies its own correlation haircut to the payout. Market odds shown are the raw multiplication; actual SGP payout will be lower.

ⓘ GLOSSARY

PROBABILITIES

Model — Our simulation's estimated win/cover/over probability for this game

Pinnacle — Sharp offshore book — de-vigged implied probability. Best market signal available. Used as the sanity check

Retail — US sportsbook (DraftKings / FanDuel / BetMGM) — de-vigged implied probability. This is what you actually bet into

Edge — Model prob minus Retail implied prob. Positive = model likes this side more than the market does

Band (3–7) — 25th–75th percentile range from the simulation. The game lands inside this range 50% of the time

BET MARKETS

ML — Moneyline — straight win/loss bet. No spread. Model uses a 35% model / 65% Vegas blend since our sim only models pitching

RL — Run Line — home team -1.5 spread. Home team must win by 2+ runs to cover. Primary model bet

O/U — Over/Under — total combined runs scored. Model picks the better edge direction (OVER or UNDER)

K prop — Strikeout prop for the starting pitcher. Line = posted K total. P(O) = model's probability of going over that line. Edge = P(O) minus market implied

THREE-PART LOCK GATES

Gate 1: Sanity — |Model − Pinnacle| must be ≤ 4%. If the model disagrees with the sharp market by more than 4 points, something is wrong — skip the game

Gate 2: Odds Floor — Retail ML must be better than −225. Avoids heavy favorites where you risk too much to win too little

Gate 3: Edge — Model must beat the retail implied probability by ≥ 1.0%. This is the actual closing line value (CLV) edge you're betting on

TIER 1 — Edge ≥ 3.0% — strong signal. Quarter-Kelly sizing

STARTER FLAGS

VOLATILE — Pitcher's recent velocity is trending down — higher variance, less reliable projection

GAINER — Pitcher's velocity is trending up — potentially outperforming their season stats

xwOBA — Expected weighted on-base average allowed. Measures pitcher quality based on contact quality, not outcomes. Lower = better pitcher. League avg ≈ 0.315

✓ confirmed — Official lineup confirmed by the team

TIER 2	Edge ≥ 1.0% — medium signal. Eighth-Kelly sizing
~ projected	Probable starter based on rotation — not yet officially confirmed

HOW IT WORKS

Level 1	XGBoost + LightGBM + CatBoost ensemble predicts the probability each team covers the run-line from both perspectives independently — not just 1 minus the other side
Level 2	Bayesian hierarchical stacker adjusts raw probability based on pitcher matchup type (LHP vs RHP), lineup quality, bullpen strength, umpire K/BB tendencies, and how much the model agrees with the Pinnacle sharp market
Key inputs	Pitcher xwOBA/K%, bullpen ERA/WHIP, batting matchup quality vs LHP/RHP, park factors, circadian travel edge, umpire tendencies, Vegas line. Trained on 2023–2025 MLB games (~7,300 games)

WHEN TO BET

TIER 1 (≥3%)	Strong signal — quarter-Kelly stake. All three lock gates passed with a meaningful edge over the retail market
TIER 2 (≥1%)	Medium signal — eighth-Kelly stake. All three gates passed but edge is smaller; size accordingly
DO NOT BET	"No Pinnacle" games (no sharp market sanity check) or games marked "Sanity fail" (model disagrees with Pinnacle by >4 points)
2025 Record	Model ≥ 0.580 → 58.3% win rate (+11.4% ROI) · Model ≥ 0.600 → 62.5% win rate (+19.3% ROI) across 2,398 games. Best months: Apr, May, Aug, Sep
